`plotly.js` example

This document will show how to use `plotly.js` to automatically make charts from your tables. Here is a table:

n	a	b
1	5.6	7.8
2	9.4	5.9
3	11.6	5.2
4	13.7	4.5
5	18.1	2.8
6	22.0	2.4

Table 1: Random numbers

And here is the corresponding chart:

Figure 1: The chart

To do this, you yould inclue this in the head:

```
<js relative-to="default-dir">js/libs/plotly.min.js</js> // The js library, included with the build
<cowx relative-to="default-dir">examples/plotly/convert.cowx</cowx> // An example cowx file
```

In the document, just use:

```
<!auto-chart :table-id="the-id-of-your-table"/>
```

The provided tag `auto-chart`, is just an example. To change things, you can modify the JS script inside.
